THE SMART MEDICARE APP

THE SMART MEDICARE APP

Smart Medicare is a medical AI app designed to simplify medical record-keeping and management. The app allows patients to upload their medical records as NFT collections with QR codes that can be updated with every visit to the physician. This feature makes it easier for patients who change doctors to have their medical history accessible to new physicians only with the patient's permission.

THE PROBLEM

01

PROBLEM 1

Decentralizing patient's Medical Record

02

PROBLEM 2

Convenient medical appointment booking

03

PROBLEM 3

Pre-clinical Diagnosis

THE SOLUTIONS

Patient Healthcare Tracking

It helps both medics and patients monitor the patient's health activity

Secured Patients Records

Patient's Data can only be accessed with the patient's authorization.

Performance incentivization

Doctors and hospitals get NTFs reward based on their performance rating by the patients.

MAIN CONCEPTS

User
The user would be required to sign up an account on the App by providing some basic medical information as follows:

1. Personal information (name, address, D.O.D, Gender etc.)
2. Basic medical information (Blood group, genotype, height, weight etc.)

Doctor/Clinic/hospital
The doctor, hospitals and clinics would be strategically verified and onboarded.

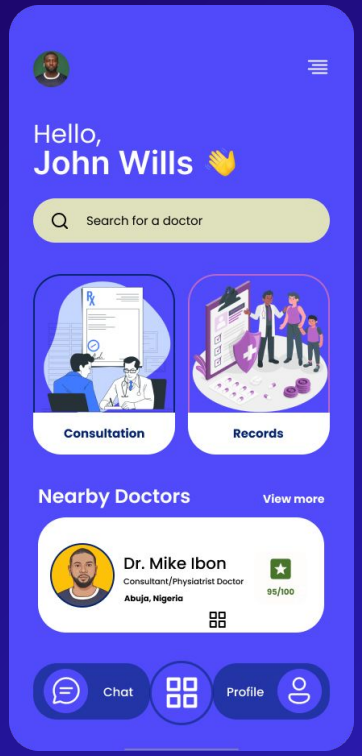
REVENUE MODEL

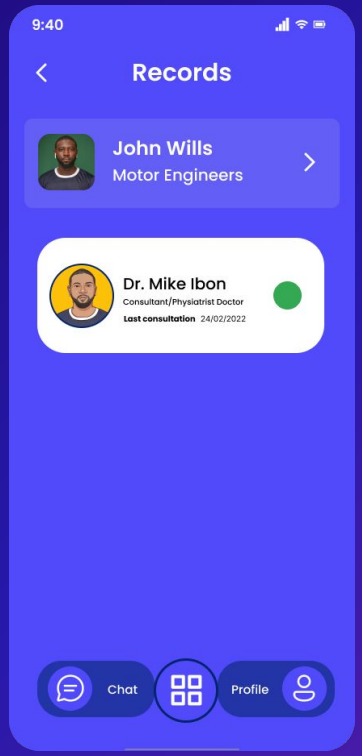
Subscription-based model. We charge healthcare providers and insurance companies a monthly fee to access and use our app.

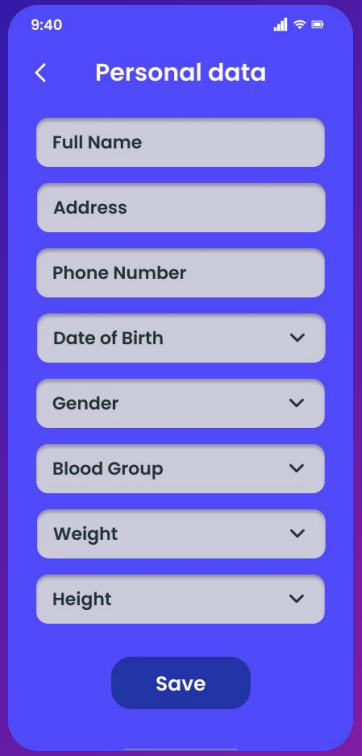
MARKETING STRATEGY

Our marketing strategy involves partnering with healthcare providers and insurance companies to promote our app. We also plan to use social media and online advertising to raise awareness and attract new users.

PRODUCT DEMO







THANK YOU

We are seeking funding and support to bring NFT Health to market. If you are interested in learning more about our app or investing in our project, please reach out to us on Telegram at EAGLES.
